Define problem:
In this brainstorm we deals with
the global co2 emission analysis.
The ways to reduce the emission of co2.
The co2 emission leads to global warming,
Climate change problems.

Problem:

The emission co2 with leads to warm the globe.

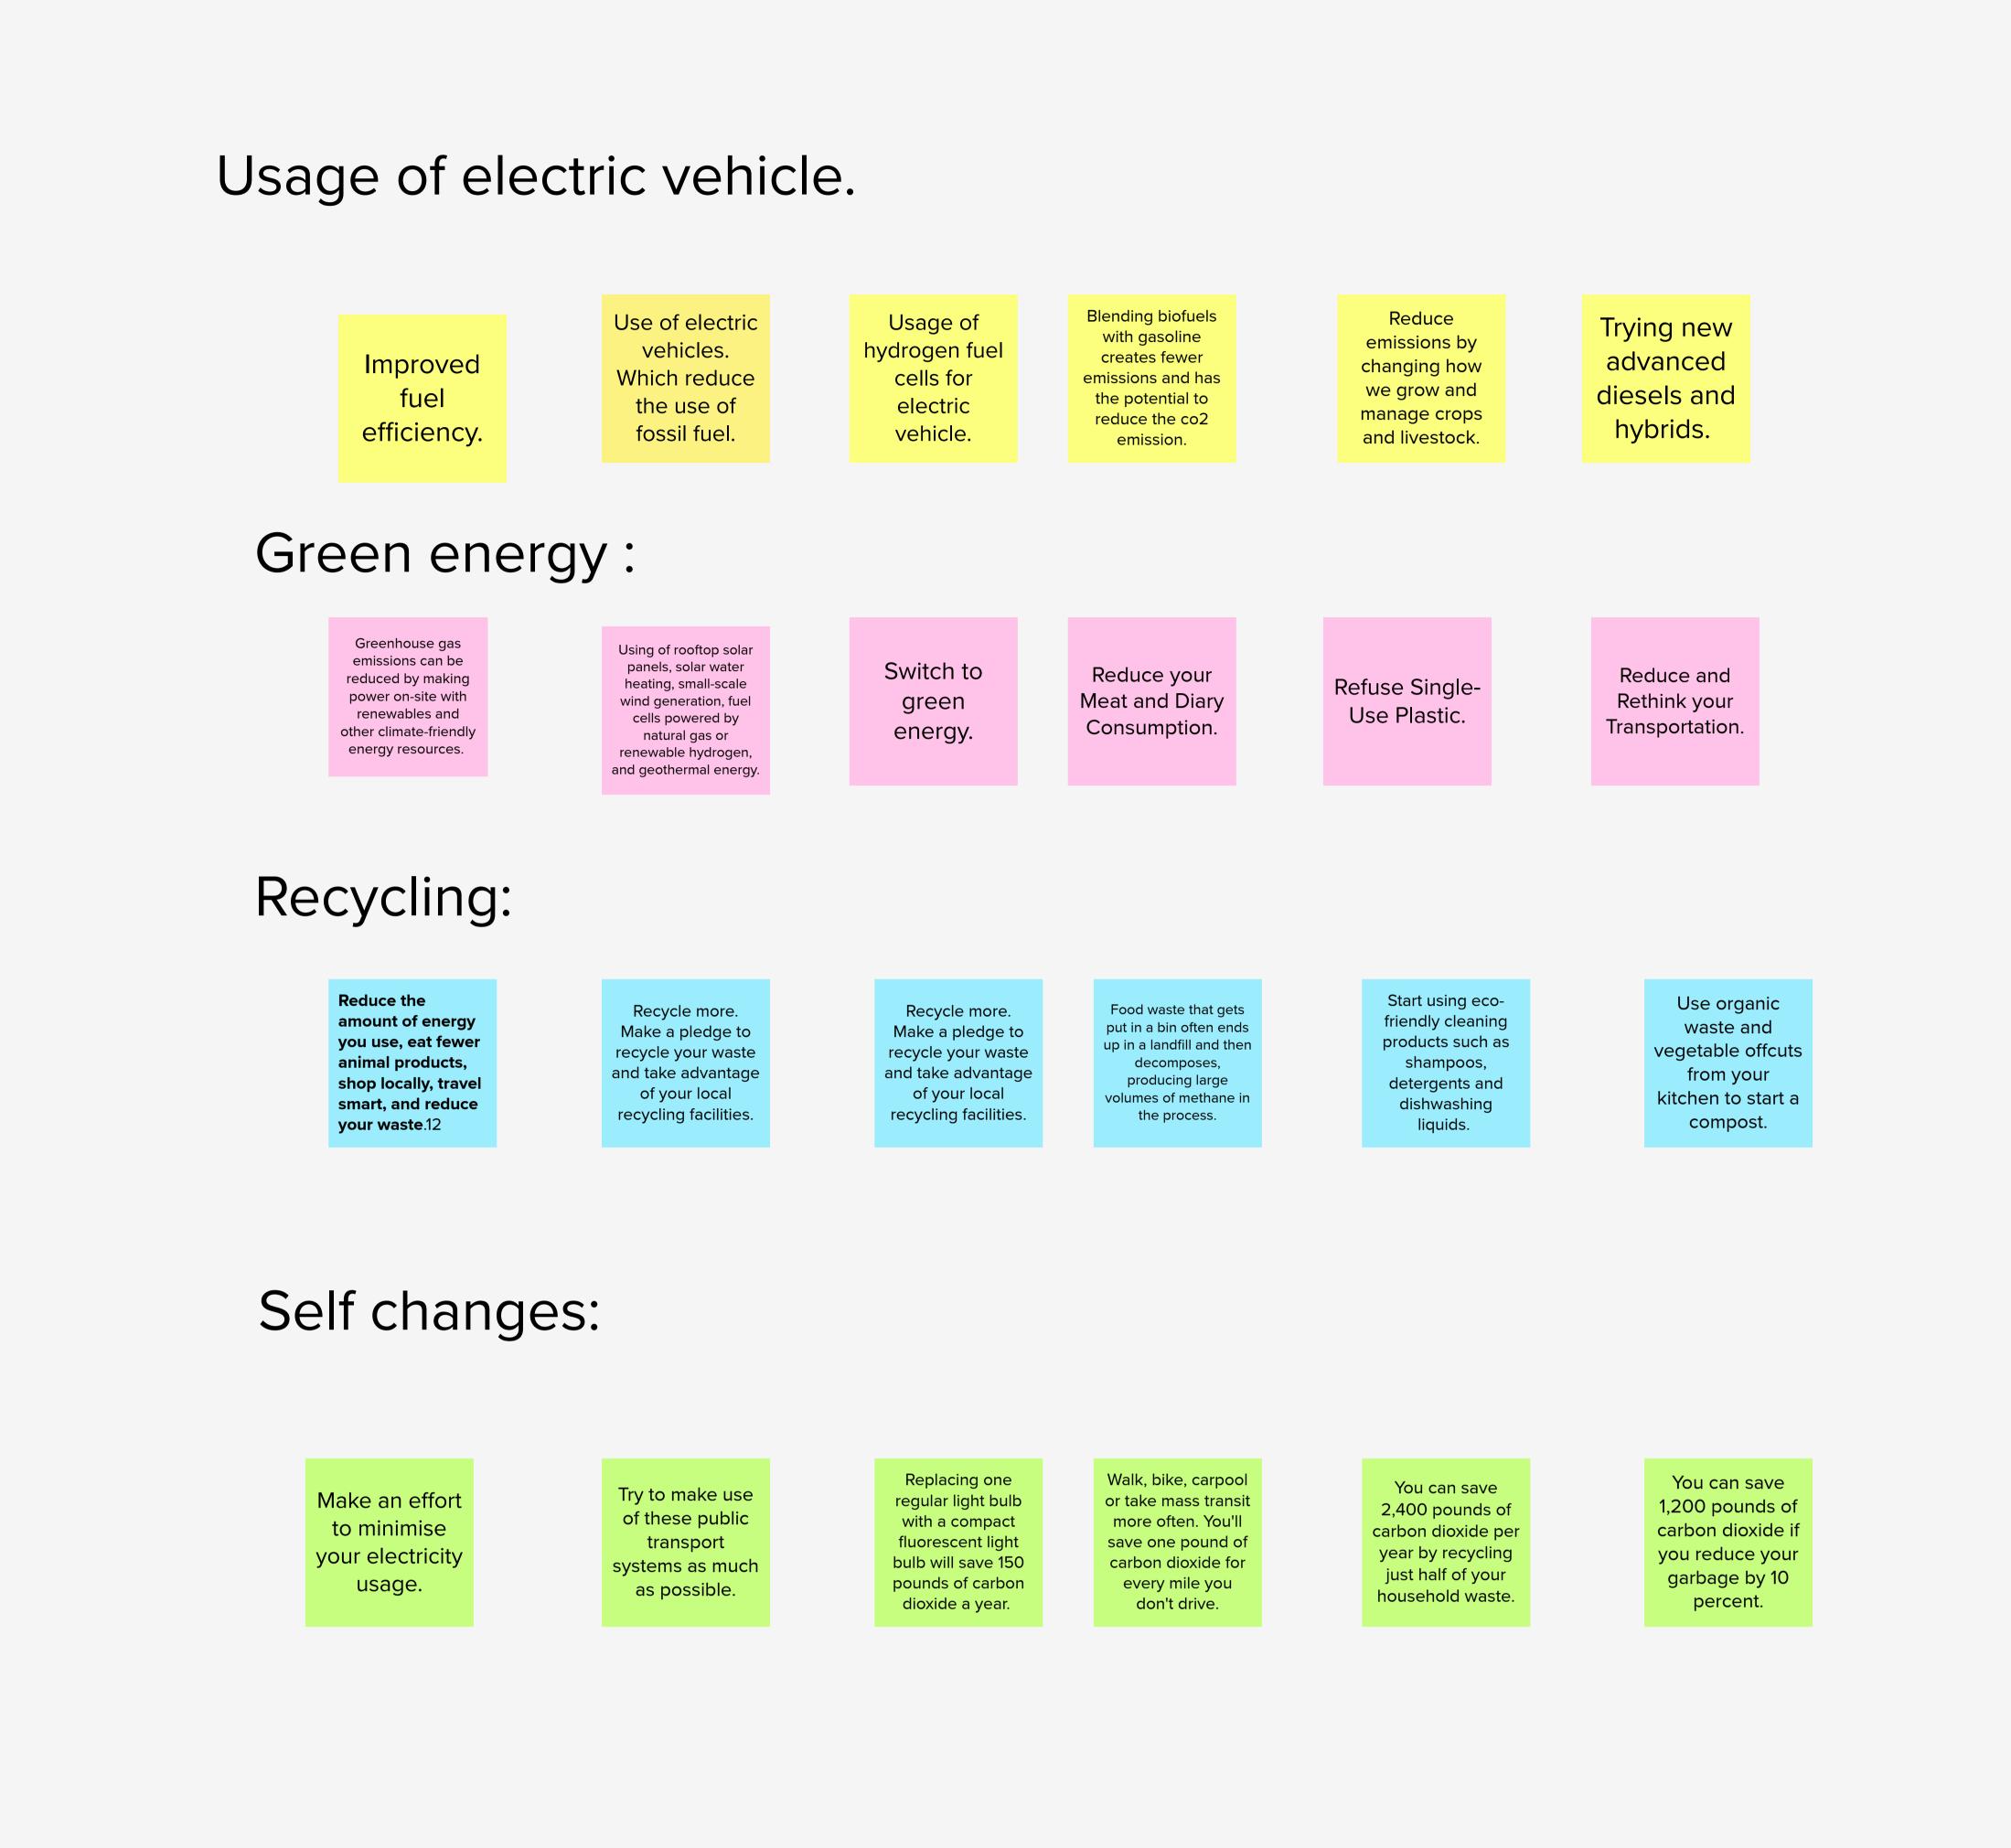

Lots of living thing with survive at low temperature cannot withstand in high temperature. So the food chain will damage. Which leads to a big problem.

Brainstorm

on 1			Person 2			Person 3		Person 4	
oved el ency.	Use of electric vehicles. Which reduce the use of fossil fuel.	Trying new advanced diesels and hybrids.	Greenhouse gas emissions can be reduced by making power on-site with renewables and other climate-friendly energy resources.	Using of rooftop solar panels, solar water heating, small-scale wind generation, fuel cells powered by natural gas or renewable hydrogen, and geothermal energy.	Switch to green energy.	from renewable Ene sources, such as wind ap or solar, would Low c	One way to help lessen the effect of climate change is to reduce our carbon travel ce, reuse, recycle One way to help lessen the effect of climate change is to reduce our carbon emissions.	Reduce the amount of energy you use, eat fewer animal products, shop locally, travel smart, and reduce your waste.12	Recycle more. Make a pledge to recycle your waste and take advantage of your local recycling facilities.
e of en fuel for tric cle.	Blending biofuels with gasoline creates fewer emissions and has the potential to reduce the co2 emission.	Reduce emissions by changing how we grow and manage crops and livestock.	Reduce your Meat and Diary Consumption.	Refuse Single- Use Plastic.	Reduce and Rethink your Transportation.	emissions will positively impact air quality and prevent thousands of manutranspor leadir sharp emission are impact	Global warming and climate change will be reduced by decrease the lance on its own. Global warming and climate change will be reduced by decrease the co2 emission.	Food waste that gets put in a bin often ends up in a landfill and then decomposes, producing large volumes of methane in the process.	Start using eco- friendly cleaning products such as shampoos, detergents and dishwashing liquids.

Person 5 Make an effort to minimise your electricity usage. Walk, bike, carpool or take mass transit more often. You'll save one pound of carbon dioxide for every mile you Try to make use of these public transport systems as much as possible. Replacing regular light with a comfluorescent bulb will save pounds of carbon dioxide a your carbon dioxide a your reduced garbage by recycling just half of your garbage by recycling are public transport systems as much as possible. You can save 2,400 pounds of carbon dioxide per year by recycling just half of your garbage by recycling garbage by

Group ideas:

Prioritize:

Feasibility

Regardless of their importance, which tasks are more feasible than others? (Cost, time, effort, complexity, etc.)
